

# Create compelling montage presentations with EasyCopy Graphics suite

## Tired of struggling with graphical data?

Wouldn't you rather spend your time presenting your fantastic ideas to the world, instead of struggling to edit content and assemble presentations? Of course! But with all of the applications you use to analyze your raw geological, geophysical and geographical data, it is a challenge to assemble your ideas in a single compelling presentation.

## Get in control using EasyCopy Montage

EasyCopy can help. It's just what you need to present your ideas easily – with intuitive and rich functionality – and efficiently – with a one stop solution to handle all your graphic needs from bitmap to vector.

- Create fantastic montages of unlimited canvas size
- View, manipulate and convert files: CGM+, CGM PIP, EMF, PDF, SVG as well as common desktop raster formats like JPEG, GIF and TIFF
- Print or plot files and montages easily from your Windows, Unix or Linux desktop

## Create montages of unlimited canvas size

Your presentations consist of complex data – CGM files, raster images, annotations and more. EasyCopy's montage tool is the perfect way to turn this data into a convincing story. No more technical hassles importing your graphics from multiple sources. You can even create 2D and 3D video clips.

## View, manipulate and convert files easily

CGM+, CGM PIP, EMF, SVG, JPEG, TIFF... Don't get frustrated dealing with files from different sources. Vector files – with their lines, shapes and colors – are constructed by mathematical formulas and demand a unique focus. Bitmap images rely on cells called pixels. But EasyCopy lets you combine vector and bitmap graphics in one display - no problem. And compatibility mode ensures the files will be viewed correctly when imported into other applications such as Microsoft PPT®.

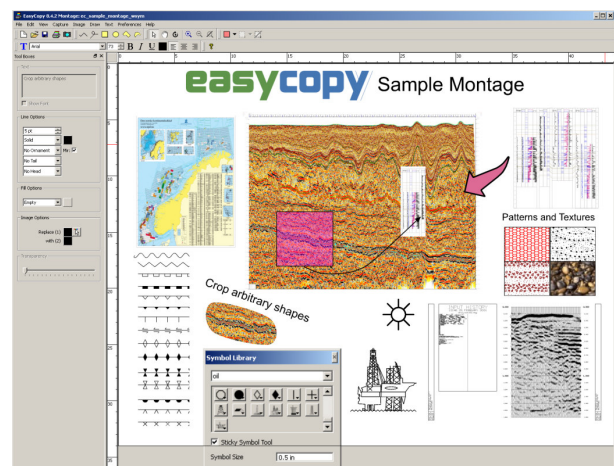

## Print and plot from Windows, Unix or Linux

Your printing needs are special. EasyCopy intelligently handles your industry specific needs with high quality CGM plotting, adapted page size, paneling and intelligent log plotting.

## It is also good for your bottom line!

EasyCopy improves your workflow to make you more productive. And, it optimizes your graphics investment with *one* easy cross-platform solution that handles both bitmap and vector formats. Your team has access across the entire network and can output on all available printing resources.

We're passionate about graphics. Call us today for a free product demo.

# Create compelling montage presentations with EasyCopy Graphics suite

## EasyCopy Graphics Suite Features

### Montage:

- Image mark-up mode or unlimited canvas size
- Add lines, shapes, symbols, patterns and text
- Edit colors and background incl. transparency
- Layout tools include position, arbitrary rotation, scale by %, align and distribution, group and ungroup
- Advanced crop and extract tools
- Screen capture directly to your canvas
- Save as layout, archive, image, or vector (PDF, CGM)

### Edit:

- Remove unwanted elements
- Convert seismic data and vector data separately for easy export to PowerPoint®
- Modify text or colors
- Add simple elements
- Save resulting file as CGM, PDF, EMF

### Print:

- Plot directly from your UNIX or Windows desktop
- Accurate print preview
- Advanced printer drivers for large format plotters
- Automatic adaption to page size
- Paneling and print layout tools
- Easy integration with other applications

### General:

- Available in English, German and Chinese
- EasyCopy has a flexible cross-platform licensing system for single node license, fixed license or floating license
- Command line options for conversion, plot and montage
- Tools to capture, record and enhance digital contents from computer monitors

## Technical Data

### EasyCopy Supports import and export of bitmap files:

- BMP
- CALS Raster Type 1
- CGM Cell-array
- GIF 87a and 89a
- JPEG incl. Baseline, Extended Sequential mode Progressive mode and Lossless JPG
- JPEG 2000
- PCX
- PBM
- PDF
- PNG
- Silicon Graphics RGB
- HP Starbase
- Sun Raster
- Targa
- TIFF incl. Bilevel, Gray, Palette, RGB
- XWD

### EasyCopy Supports import and export of vector files:

- CGM, CGM+, Seismic extensions, CGM PIP, CGM ATA, CGM CALS
- EMF, SVG, .edit, .CPM
- PDF (export to vector)

### EasyCopy supports all major platforms:

- AIX 5.3+
- HP-UX11+
- Linux (Intel or AMD x86 and x86-64)
- Sun Solaris 8+(SPARC)
- Sun Solaris 10+ (PC 64 bit)
- Windows XP, Vista and 7 ( 32 and 64 bit)
- EasyCopy supports desktop printers, print systems, and large format plotters including log plotters.
- This montage solution uses the EasyCopy, EasyCGM and EasyVect products from our graphics suite.

Valid from October 2009
